

*Choosing optics can be difficult and time consuming. **Upstate Technical Equipment** has 40 years of experience working with the leading optics manufacturers in the world and can help simplify this process. Please contact us for a free evaluation of your optical needs.*

Infinity Photo Optical

Infinity Photo-Optical Company is the recognized world leader in long-distance and continuously-focusable microscope technology. Infinity has established itself as the benchmark by which all others in this industry are judged. Infinity invented Continuously-Focusable and Internal-Focusing Microscopy. Our instrument/lens line offers the freedom to choose working distance, depth-of-field, magnification and resolution—at will. Infinity instruments (many of which operate on patented principles) offer greater user-friendliness, versatility and compatibility—with performance levels unmatched by other products—regardless of price. Infinity manufactures long-distance microscopes, continuously-focusable microscopes, macro systems, internal-focusing devices and other lenses for industrial inspection, process/product monitoring, machine vision, QC, advanced imaging, non-contact gauging/inspection, laser/biomedical research & cinematography.

We also offer the following:

Navitar - is the leading supplier of optics, opto-mechanical sub-assemblies and opto-electronic system solutions for machine vision, automation, assembly, imaging, testing, measuring, and inspection. Navitar's optical designs are involved in applications such as semiconductor metrology, electronic imaging, telecommunications, biometrics, photonics R&D, non-contact measurement, and biotechnology and life science.

Fujinon - offers a line of high end machine vision lenses, as well as "broadcast quality" motorized zooms and economical vari-focals.
