

*Few people realize that lighting is one of the most important components in an imaging system and that every application has enough nuances to require a unique lighting solution. Since the illumination of your target is the starting point of the system chain a bad lighting decision is amplified throughout the rest of the system and ultimately you will spend a lot of time, effort and resources to compensate for the error. **Upstate Technical Equipment** understands how important the lighting decision is and will specify the best solution for your application. In fact, if we conclude that there is no "off-the-shelf" lighting product for you then we will work to develop a custom solution.*

SCHOTT - a leader in the manufacture of fiber optic and LED solutions for machine vision, presents an extensive offering of cold light sources and accessories.
